

The Quick Change Over feature is a lateral guide immediately in front of the blade. It is powered by a motor and automatically adjusts to different widths of product – a particular advantage with products of different widths. This automatically improves the slicing quality achieved, particularly if you change or vary your products frequently.

++++For Schiwa High Performance Slicers type SCV 617, SCV 627, SCV1010 and SCV2010++++
